High speed Internet
WAP browser

Get out of the office and take it with you.

You don't need a laptop. With the Nokia 9210 Communicator you can check your email, send a fax, make some calls, check an Internet site, and have all your addresses and phone

numbers where you need them. Without having to carry around a few kilos of electronic equipment.

Take the Nokia 9210 Communicator and take care of business when it suits you.

Your office is mobile

You communicate by email, fax and the Internet. Now they're as mobile as your phone.

The Nokia 9210 Communicator contains just about everything you need at the office - phone, fax, email, Internet, calendar, Word, Sheet, WAP. So you have your addresses, phone numbers and calendar notes in your pocket instead of in your desk drawer. Check your email in a taxi instead of going back to the office. And when you get an idea, act on it immediately - check an Internet site, send email, make a call.

Your office is as mobile as you.

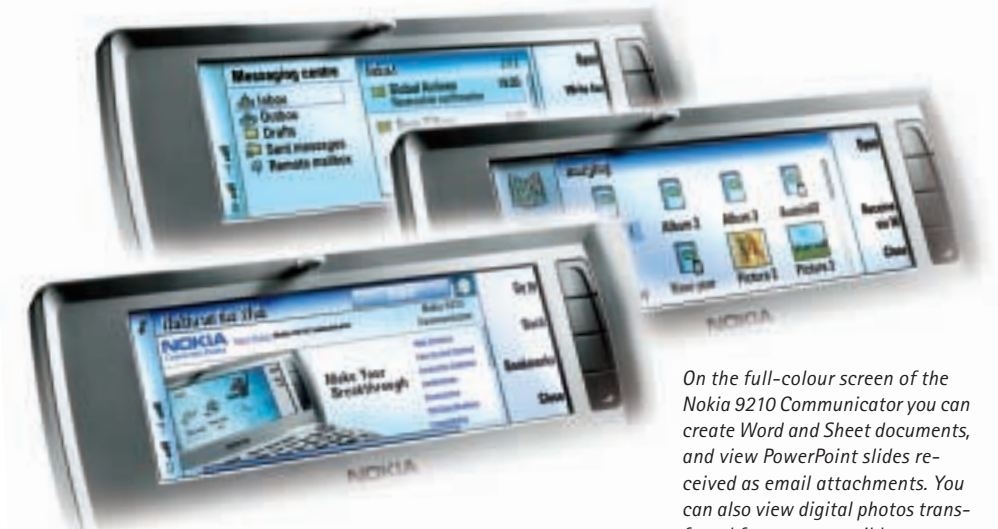

Be brilliant

The Nokia 9210 Communicator has a high-quality screen with 4096 colours.

So you can view PowerPoint slides in full colour. Download Web pages - the communicator supports frames. Write and send Word and Sheet documents. And transfer a photograph from a compatible digital camera, view it in colour, save it as your desktop image, and send it by fax or email.

Freedom of movement means having less to carry while having everything you need.

On the full-colour screen of the Nokia 9210 Communicator you can create Word and Sheet documents, and view PowerPoint slides received as email attachments. You can also view digital photos transferred from a compatible camera, as well as video clips. In 4096 colours.

Mobile multimedia

The sharp and clear colour screen not only makes it easier to use existing applications like email and the calendar. It also makes possible totally new services. You can view video clips received as attachments in email or downloaded from the Internet. The colour screen combined with multimedia and wireless imaging creates new opportunities in industries such as insurance, journalism, and security.

New possibilities

The Nokia 9210 Communicator is the first product to support the Symbian

operating system. This open platform enables independent companies to write applications for the communicator, creating totally new possibilities for applications, such as having maps, dictionaries or games which you can download from the Internet or load from a memory card.

Brilliantly simple

You already know how to use a mobile phone. So you already know how to use the Nokia 9210 Communicator. It's even easier to use than a mobile phone, in fact, because of the full keypad and full-colour display. The consistent menu functions and the colour screen with icons provide you with a working environment like on a PC.

Pretty fast, too

The Nokia 9210 Communicator works at three speeds. At normal speed, it works at up to 14.4 kbps in High Speed Circuit Switched Data networks. For sending and receiving email, you can shift up to double speed, up to 28.8 kbps. And for downloading Web pages and receiving email, it works at triple speed, up to 43.2 kbps in HSCSD networks.

Just get going

If you pack a laptop, palmtop, and mobile phone - and the cables, chargers and adapters - you won't have much room left in your carryon luggage. Probably not even enough room for a clean pair of socks. The Nokia 9210 Communicator, on the other hand, fits in your jacket pocket. Make a clean getaway.

Many organisations have made the Nokia 9210 Communicator a key part of their communication systems. Employees can access ordering and inventory databases over the Internet or the company's intranet, or via WAP access.

The large display and keypad make it easy to access WAP services. So you can find the nearest French restaurant, send a fax to make a reservation, and get there using a map from a WAP service.
